Postmodern Geography: Theory and Praxis

Claudio Minca

Postmodern geography is an umbrella term for Marxist, feminist, and postmodern approaches to theory and practice in geography. This approach seeks to understand the social and spatial dimensions of power, class, gender, and race in contemporary society.

The book "Postmodern Geography: Theory and Praxis" by Claudio Minca explores the key themes and debates that have shaped this field over time. It brings together some of the most authoritative voices in contemporary geography to provide a comprehensive overview of the postmodern turn in the discipline.

Key themes include the fragmentation of the urban space, the decentring of the gentrifier subject, and the relationship between theory and practice. Minca argues that postmodern geography offers a new way of understanding the world, one that is more attuned to the complexity and fluidity of contemporary life.

In summary, "Postmodern Geography: Theory and Praxis" is an essential read for anyone interested in understanding the theoretical and practical implications of postmodernism for geography.
